## **DETAILED ACTION**

1. This action is in response to the amendment and remarks received on September 22, 2010.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 5, 6, 13, 14 and 16-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crutcher (USPN 5,772,098) in view of Dittrich et al. (USPN 6,712,255).

In reference to claims 5, 6, 13, 14, 16-23, Crutcher discloses a portable type fastener driving tool comprising: a main body 3 housing a rod; a combustion driven rod (within 4); a head part 8 disposed on a front end of the main body 3 which is provided with a fastener guiding part; a round drum shaped fastener magazine 2 including a cover; and a power operated 30 fastener feed means disposed at the head part 8 on the fastener retaining means, the fastener feed means including a rotary type feed member 42 that rotates about a point 39. Crutcher does not disclose the rotary feed member to be electrically actuated.

Dittrich et al. teaches a portable type fastener driving tool comprising: a rod 12 movable within a main body 11; a head part 13' disposed on the front end of the main body 11, the head part 13' defines a fastener guide part; and feeding mechanism comprising: a rotary feed member 61 driven by an electric motor 63 and a rotary feed gear assembly 64, wherein the rotary feed

Application/Control Number: 10/599,246

Art Unit: 3721

member is controlled an electric circuit (column 7 lines 62-67). It would have been obvious to one having ordinary skill in the art at the time of the invention to modify the rotary feed member to have a separate power source than the drive rod, such that the rotary feed member is

Page 3

4. Claims 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crutcher (USPN 5,772,098) in view of Dittrich et al. (USPN 6,712,255) as applied to claim 5, and further in view of Maynard (USPN 3,628,715).

electrically actuated while the rod is combustion actuated, since column

Regarding 7-12, Crutcher discloses a fastener driving tool comprising a rod and a rotary feed member as modified in view of Dittrich et al., wherein the a control circuit monitors actuation of the rotary feed member based on a predetermined process; however a first and second sensor are not disclosed. Maynard teaches a fastener driving tool comprising a first sensor 32 that detects a retracted position of a drive rod; and a rotary feed member 34 associated with a sensor (column 5 lines 9-11) that detects rotation of the feed member and controls rotation of the feed member in response to the sensor (column 1 lines 20-28). It would have been obvious to one having ordinary skill in the art at the time of the invention to modify the control circuit of Crutcher to include connection to a first and second sensor as claimed, since column 5 lines 12-13 of Maynard suggests that such a modification ensures proper positioning of a fastener prior to actuation of the rod, such that jamming an improper driving of the fastener is prevented.

5. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Crutcher (USPN 5,772,098) in view of Dittrich et al. (USPN 6,712,255) as applied to claim 5, and further in view of Potuccek (USPN 4,383,608).

Application/Control Number: 10/599,246 Page 4

Art Unit: 3721

With respect to claim 15, Crutcher discloses a fastener driving tool comprising a rotary feed member 43 comprising multiple protrusions 45, 46 that engage different portion of a fastener, but Crutcher does not disclose the rotary feed member including an endless belt. It would have been obvious to one having ordinary skill in the art at the time of the invention to further modify the rotary feed member of Crutcher to include a second rotary feed member and endless belt having a plurality of protrusions, since column 1 lines 46-50 of Potuccek states that such a modification provides desired spacing between a plurality of fasteners thereby ensuring positive feed of the fasteners to a proper position with respect to the rotary feeder and a drive rod.

## Response to Arguments

- 6. Applicant's arguments filed September 22, 2010 have been fully considered but they are not persuasive.
- 7. The primary reference, Crutcher, discloses a fastener feeding mechanism oriented on a portable fastener driving tool as claimed; however, Crutcher discloses the fastener feeding mechanism to be actuated by a pneumatic driven piston separate from the pneumatic actuation of a fastener driver. Dittrich et al. teaches a feeding mechanism oriented on a portable fastener, wherein the feeding mechanism, like Crutcher, is independently actuated from a pneumatic driven piston. Furthermore, the feeding mechanism of Dittrich et al. is motor actuated. Although the motor actuated feeding mechanism of Dittrich et al. is used to feed<sup>1</sup> a strip of propellant from a fastener feeding mechanism.

<sup>&</sup>lt;sup>1</sup> Feed: to supply (http://dictionary.reference.com/browse/feed)

Application/Control Number: 10/599,246

Art Unit: 3721

8. Nonetheless, Examiner has relied upon Dittrich et al. for its teaching of separate actuation of distinct elements of a fastener driving tool, wherein one element is actuated by a pneumatic source and the other element is actuated by an electric motor. Column 3 lines 24-32 of Dittrich et al. is found to be sufficient teaching and motivation to modify the feeding mechanism of Crutcher, since such a modification permits an element to be electronically controlled thereby allowing the element to operate independently under predetermined criteria.

Page 5

## Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to GLORIA R. WEEKS whose telephone number is (571)272-4473. The examiner can normally be reached on M-W & F 8:30am-12:30pm, 3:30pm-6:30pm and 9pm-10pm; Th 9am-2pm, 4pm-6pm and 9pm-10pm.
